

EQUIPLAS[®]R

Equiplas R is equine plasma collected from *Rhodococcus equi* hyperimmunised donor horses. It is very rich in specific antibodies to Virulence associated protein A (VapA) known to be the major virulence factor of *Rhodococcus equi*.

The minimum amount of specific anti-VapA antibody present in one bag (one litre) is measured by ELISA test and equivalent to that present in a Standard Plasma with a potency of 1.0.

Give foals under your care an unfair advantage in fighting virulent *Rhodococcus equi*. In stock now at your local veterinary wholesale supplier.

EQUIPLAS R ADVANTAGES

- All of the qualities of Equiplas
- APVMA Registered
- New potent *Rhodococcus equi* vaccine used on donors
- Known quantities of antibodies to Virulence associated protein A (VapA)
- Demonstrated safety and efficiency
