PLASVACC
FOR LIFE

All Plasvacc Canine Donors have been donated and rehomed to a safe communal open plan quarantined kennel. Our Donors are cared for 365 days a year with constant veterinary supervision. They are routinely treated with heartworm and intestinal worming medications. They are free of fleas and hyperimmunised for the manufacture of our Caniplas products. We export our canine plasma overseas and our donors are intermittently tested for Babesia, Heartworm, Coxiella burnetti and other blood-borne parasites.
