CANIPRBC®

Product Information

Higher Red Blood Cells improve immunity and promote faster healing.

When a dog's future is in your hands, what's in your refrigerator matters.

CANINE PACKED RED BLOOD CELLS

CaniPRBC®

Collected from our hyperimmunised canine donors, CaniPRBC® (Canine Packed Red Blood Cells) is available in a 175 ml pack size.

CaniPRBC® is enhanced by Leuko-depletion, Blood typed DEA 1.1 Negative and Coombs tested negative. This testing ensures that CaniPRBC® is of the highest quality. CaniPRBC® is registered under Australian Pesticides and Veterinary Medicines Authority Registration Number 81359.

RAPID STERILITY TESTING

CaniPRBC® is quality-tested with a state-of-the-art rapid sterility method developed for human transfusion medicine, bringing the same standard of safety to canine patients. Bacterial contamination is among the most serious risks in blood product transfusion, and traditional culture-based testing can be slow. Rapid sterility testing detects contamination sooner, so CaniPRBC® reaches your clinic with greater confidence and less waiting, which matters most when every hour counts. For your clients, it means their pets receive product held to human pharmaceutical standards.

PURITY & SAFETY

Our donor pack is carefully screened, meticulously cared for, and quarantined at our kennel in Queensland, Australia. All Plasvacc canine donors have been voluntarily donated to our communal, open-plan quarantined kennel. Donors are cared for 365 days a year and have constant veterinary supervision. They are routinely treated with heartworm and intestinal worming medications.

Our canine donors are also free of fleas and hyperimmunised for the manufacture of our Caniplas® products. Donors are intermittently tested for:

- Babesia
- Heartworm
- Coxiella Burnetii
- Other blood-borne parasites.

EXPIRY

The shelf life of CaniPRBC® is 42 days, as per Plasvacc's stability studies with respect to haemolysis %.

STORAGE

CaniPRBC® is a refrigerated product. Store between 2-6°C.

ORDERING & SHIPPING

Contact Plasvacc Pty Ltd to order. CaniPRBC® is currently made to order to maximise the shelf life and is produced 4 days per week. We prefer to despatch orders early in the week to avoid any weekend transportation disruptions. International shipping available.
